AWS Alarm & Indicator Unit

Manufacturing Ref TY191

The STS AWS Alarm and Indicator Unit is part of Network Rail's BR's Automatic Warning System

The unit meets the requirements of Network rail Group Standard GE/RT8035 and is manufactured to the requirements of British Railways Specification TEE/E/81/R/39.

It provides:

Audible outputs to indicate Clear or Caution signals.

A visual reminder to the Train Driver when the last signal was set at Caution.

The audible outputs take the form of an electronic "Chime" for the Clear aspect and a continuous tone for signals at Caution.

The visual indicator has a luminous dial for night viewing

A quick release bayonet connector is provided for ease of fitting and a 5 mm earth screw.

The equipment has been in use on Network Rail since 1983.
