

WEEE and RoHS compliance statement

STSm Rail is committed to minimising the environmental impact of its products. Whilst its products are specifically exempt from WEEE and RoHS regulations, by virtue of their being both Safety Critical and part of fixed installations, we have designed our products with disassembly and recycling in mind and would be pleased to provide further advice to our customers in this regard.

STSm Rail provide a Repair/Refurbishment service which is highly valued by our customers. This activity is specifically exempt from the RoHS regulations. By extending the useful life of our systems, the effect of this service is to dramatically reduce the amount of waste material and thus the impact on the environment.

STSm Rail provide a spares service to our customers. Such spares are used for repair, upgrade and expansion of existing systems, again this activity is exempt from the RoHS regulations.

Our products are designed for in service life of at least 10 years and together with the Repair/Refurbishment service offered, this service life can be extended even further. Consequently the impact on the environment during the life of our products is minimal. When customers eventually have to dispose of the products, we have designed them using simple assembly techniques so that the main components (sheet metal, plastics etc) can be readily recycled.

Our products are permanently installed at our customer's premises and are classified under the WEEE and RoHS regulations as Fixed Installations. They therefore fall outside the scope of the WEEE and RoHS regulations. Where STSm Rail additionally supply commercial terminal or control and monitoring equipment (such as PCs, printers, etc) these are subject to the WEEE and RoHS regulations, and may be returned to us for disposal. We in turn would return these items to our suppliers for disposal.

Our products are often used in a safety critical environment i.e. Railway Telecoms, and we enjoy an enviable record of reliability. We will therefore adopt a cautious approach when introducing new components and processes into manufacture. This will ensure little or no detrimental effect on the reliability of our products.

STSm Rail are committed to reducing the impact of our products and services upon the environment and we endeavour to ensure that our products are manufactured to comply with RoHS regulations and encourage this culture from our suppliers.
